

Liquid Nitrogen / Hyfreccation Therapy Consent

Liquid nitrogen / hyfreccation works by freezing / burning respectively to treat and remove the lesion. Risks of this procedure include, but are not limited to, the following:

Pain - Some people may feel some pain with this treatment. The pain may be stinging or sharp and may continue after the procedure and throughout the healing process.

Redness - There may be surrounding redness of the area. The redness may be present for days to months.

Swelling / Blistering - Swelling and/or blistering will be present after the treatment and should likely resolve after 1-2 days.

Scabbing - A scab may be present after liquid nitrogen / hyfreccation therapy. The scabbing will disappear during the natural wound healing process of the skin. Scarring or discoloration may result from any scab formation.

Hyperpigmentation / Hypopigmentation - Discoloration of the procedure site is expected and may be either hyperpigmented (dark) or hypopigmented (white).

Consent

I, the undersigned, have read and understand the information contained within this consent form. My signature indicates that I have read and understand the information in the consent. I hereby release the dermatology office and my physician from all liability associated with this procedure. Furthermore, my signature below indicates my consent to the treatment described and my agreement to comply with the requirements placed on me by this consent form.
